for the ordinary soldier the non commissioned officer and the junior officer the large proportion of the lower strata in military organisations the expectations of levels of responsibility and decision making are rapidly increasing in 1999 us marine corps general charles c krulak addressed this in his essay the strategic corporal leadership in the three block war which described the range of challenges likely to be faced by marines on the modern battlefield and where a range of operations fighting peace works and humanitarian assistance might occur simultaneously within a very limited precinct three blocks the chapters in this book use the metaphor of the strategic corporal to focus on the demands facing junior leaders in military operations in the twenty first century and what might be done to enhance their ability to respond to them the circumstances in which these decisions are made need to be better understood by soldiers and their critical onlookers be they villagers on the scene senior military or political leaders remote from the operation or anti war activists thousands of miles away being strategic is not just about a soldier s professional mastery increasingly it also means a genuine familiarity with legal and ethical issues and an ability in low intensity conflict to understand local culture and communicate with those in villages and neighbourhoods whose goodwill or at least neutrality are vital to ultimate success in the non war circumstances in which many western militaries operate such as humanitarian assistance and disaster relief as well as peacekeeping operations it means dealing with civil authorities in the distribution of aid or even the administration of justice if local institutions have broken down sometimes it involves negotiation and mediation it may even mean having an understanding of the ways pervasive modern media works and its potential to surveil and sometimes derail a mission sometimes it also means having a better understanding of the challenges that face the soldier s own defence force including the malign effects of bureaucratic inertia and the outsourcing of key capabilities to private contractors the book combines theoretical discussions with practical examples but it is not as so many books about future conflict are a discussion of the

technology of future war rather it provides opportunities for specialists in a range of security related fields to consider the issues and challenges of military leadership the role of civilians and contractors the importance of international humanitarian law and even whether strategic gains can be made without the deployment of troops strategic corporals or otherwise
